Subject	Teacher's Comments
English	He has great language and presentation skills and shows strong grammar knowledge. However, he tends to be careless in both presenting and writing. He needs to focus more on academic improvement and be more obedient and respectful towards the teacher.
Mathematics	Although he does the mathematics problems hard, he sometimes lacks the ability to solve thinking problems. He needs to practice the questions again and again.During PBL, even though he didn't put much effort, he participated in the collaboration with his team members.
Science	He has demonstrated a general grasp of scientific principles and applied them adequately in Science PBL. He has shown significant growth in science, but sometimes he only puts less effort so he still needs to develop accurate hypotheses, critically evaluate information, explain occurrences, and actively participate in discussions.
Global Perspectives	He has the ability to analyze the issues well and think logically while considering causes and consequences of the problems. In terms of his area for improvement, he needs to involve more actively in class discussions and collaborate more with his classmates.
ICT & Web Development	He demonstrated a strong work ethic in the previous semester; however, his level of effort has slightly declined this term. During project-based learning, he is encouraged to contribute more actively to group tasks, as he occasionally struggles to complete his daily work. With renewed focus and consistent effort, he has the potential to achieve better results.
